December 2022	69	0	25402
January 2023	100	0	25502

There were 11 surveillance inspections conducted at 8 different sites for a total of 100 fish sampled this month. Samples are targeted to moribund and fresh mortalities. The water temperatures continued to decrease due to colder air temperatures. Routine harvest continued. One site was Category 2 and will conduct biweekly sampling, along with the other active site in the same bay. All other sites with fish in the water remained Category 1 and were scheduled for monthly sampling.
